DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02/21/2006 has been entered.

2. Applicants' amendment dated 01/17/2006 has been received and entered. By the amendment, claims 9-12, 14, 22-25 and 27 are now pending in the application. Claims 1-8 and 15-21 stand withdrawn from consideration.

Claim Rejections - 35 USC § 102

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claims 9-12, 14, 22-25 and 27 stand rejected under 35 U.S.C 102(e) as being anticipated by Matsuda, US Patent No. 6,646,689, as stated in the previous office action.

The above claims are anticipated by Matsuda's figure 2 and accompanying text which disclose a method of manufacturing an liquid crystal display (LCD) device comprising:

an alignment layer line (forming orientation film), wherein a plasticizing line including an alignment controlling force inherently exits during orientation film processing (i.e., rubbing method).

. pattered spacers (forming spacer);

Application/Control Number: 10/607,007 Page 3

Art Unit: 2871

. a liquid crystal layer line (dropping liquid crystal);

. a sealant coating line (forming sealing material);

. an assembling line (UV irradiating and actual UV curing);

. a cutting line (cutting panel);

. at least one buffer line (Matsuda's improvement, i.e., restraining step, see abstract);

an inspecting line being an inherent step to complete the LCD manufacturing.

Response to Arguments

5. Applicant's arguments filed 01/17/2006 have been fully considered but they are not persuasive.

Applicants' argument, regarding claims 9 and 22, that nothing in Matsuda teaches or suggests at least one buffer line to synchronize movement of the first and second substrates (amendment, page 11). The Examiner respectfully disagrees with Applicant's viewpoint since Matsuda does disclose the restraining feature to avoid a displacement between two surfaces of two substrates (see abstract). In order to do that, a robot (9) has been provided for moving the first substrate (31) and the second substrate (32) among the loading parts 1 and 2, dropping unit 4, etc... (col. 7, lines 20-24). In other words, although Matsuda does not explicitly state that a buffer line for synchronizing movement of the first and second substrates, the Matsuda' restraining feature through the robot would do such feature of "synchronizing" as well.

Art Unit: 2871

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Nguyen whose telephone number is 571-272-2297. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 571-272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
